**Poolkemie** offers a complete and versatile line of professional **chemical products** such as **bi-component rubbers** and **resins** that are used in many industrial appliances, applied arts, in building.

In particular **Poolkemie** is leader in formulation of **silicone** and **polyurethane elastomers** for flexible moulds and matrices production and of **epoxy resins**.

Furthermore Poolkemie distribution program includes a line of complementary products used in moulds and matrices production such as **release agents**, **charges**, **additives** and **plaster powder**.

The Poolkemie distribution program is completed by four distinct lines for professional:

- Line of rubber sheets
- Line of mono and bi-component adhesives and sealants for several industrial applications
- Line of bi-component resins for flooring
- Line of protective and waterproof coatings and special foams for building and tunnelling

Poolkemie products are simple to use, technically innovative and provided with high mechanical characteristics.

**We'd like to invite you to discover the world of Poolkemie....**

## Core business

Formulation, manufacturing and distribution of rubbers (silicone and polyurethane), resins (polyurethane, epoxy, polyester) and high technology composite materials for advanced applications.
